

RED and BLUE

discrete replacement opamps

for mci 400 series consoles

It's true ~ sage ELECTRONICS® has developed discrete component, plug-in replacements for the MCI 2001 IC opamp as used throughout MCI 400 series consoles.

> the RED SE-DOT5-a and BLUE SE-DOT5-ab discrete opamps

SE-DOT5s feature full rail +/- 24V operation and gold pin octal footprint thus providing direct plug in replacement of the original MCI 2001 metal can ICs.

We have R&D'd SE-DOT5s extensively throughout our beloved MCI JH-416 <http://www.sageelectronics.com/bovasound> for many many months ... The improvement is startling.

Strategic replacement of ICs in the master section plus even a few channels - offers a serious improvement in the sonics of the entire board which will change how you record and mix.

INTRODUCTORY OFFER

*CDN \$59. / SE-DOT5 module (red or blue)
